

## A Slice

For practice with fractions, 2 players.

- *Preparation:* Cut out spinner (insert pencil tip at center; the number facing the spinning player after his or her spin is the number for play) and pizza or cake slices (depending on which is more culturally relevant).
- *How to Play:* One player takes the top row and one player takes the bottom row, so that each player gets three empty pizza/cake pans to fill. Take turns spinning the spinner. Choose a slice of pizza or cake to fit exactly on a base that has the same number of parts as the number you spun. The winner is the first player to cover their row of three pizzas/cakes.
- *Teaching Notes:* Encourage the children to use math vocabulary such as *fraction*, *half*, *quarter*, *third*, *divide*, and *equals*, by talking aloud about what they are doing while they are placing their slices.
